

PYTHON CHATBOT ASSIGNMENT

Name :- KARRI L O V E SATYANARAYANA REDDY

Regno :- 99230040200

Dep :- CSE(AI&ML)

Objective

Build a simple rule-based conversational chatbot in Python. The chatbot continuously interacts with the user, recognizes different messages, provides appropriate responses, and allows the user to exit.

Python Code

```
print("Welcome to My Chatbot!")

name = input("What is your name? ").strip()

print("Nice to meet you, " + name + "!")
print("You can ask me about Python, college, or the weather.")
print("Type 'bye' or 'exit' to stop.")

while True:
    message = input("\nYou: ").lower().strip()

    # Exit
    if message == "bye" or message == "exit":
        print("Bot: Goodbye, " + name + "! Have a great day!")
        break

    # Greetings
    elif "hello" in message or "hi" in message:
        print("Bot: Hello " + name + "! How can I help you?")

    # Python question
    elif "python" in message:
        print("Bot: Python is a simple and powerful programming language.")

    # College question
    elif "college" in message:
        print("Bot: College is a great place to learn, practice, and build your career.")

    # Weather question
    elif "weather" in message:
        print("Bot: I cannot check live weather, but you can use a weather app.")

    # How are you
    elif "how are you" in message:
        print("Bot: I am doing great! Thanks for asking.")

    # Unknown message
    else:
        print("Bot: Sorry, I don't understand that yet. Try asking about Python, college, or weather.")
```

Output

```
Welcome to My Chatbot!
What is your name? Lokesh

Nice to meet you, Lokesh!
You can ask me about Python, college, or the weather.
Type 'bye' or 'exit' to stop.

You: HELLO
Bot: Hello Lokesh! How can I help you?

You: hello bot
Bot: Hello Lokesh! How can I help you?

You: what is python
Bot: Python is a simple and powerful programming language.

You: tell me about college
Bot: College is a great place to learn, practice, and build your career.

You: xyz
Bot: Sorry, I don't understand that yet. Try asking about Python, college, or weather.

You: bye
Bot: Goodbye, Lokesh! Have a great day!
```

Execution Output: The chatbot successfully accepts user input, processes different messages, responds appropriately, and exits when the user enters bye.

Conclusion

The chatbot follows the required flow: INPUT → PROCESS → RESPOND → REPEAT → EXIT. It uses rule-based decision making with if/elif/else and supports flexible greeting variations.
